

Charge point management

Easy and flexible management of charging networks

Optimal utilization

of existing network connection capacity

Very cost-effective

through remote control of all integrated charge points

- The cloud-based charge point management is a cost-effective and scalable solution with little integration effort into existing energy management systems
- User-friendly and customizable web application with personalized dashboards
- Integration into local energy and building management systems enables further cost savings
- High degree of flexibility in distributing energy to the charge points
- Intelligent and cost-optimized load management based on individually adjustable parameters and interfaces
